

2002 World Population Data Sheet

of the Population Reference Bureau

Demographic Data and Estimates for the Countries and Regions of the World

2002 Data Sheet Highlights

The Road to 7 Billion

On Oct. 12, 1999, the United Nations announced that global population had reached the 6 billion mark, just 12 years after passing 5 billion. When will the world's population reach 7 billion? According to the United Nations Population Division's most recent projections, it could happen as early as 2011 or as late as 2015. The outcome depends greatly on birth rate trends in China and India, which are currently home to nearly 38 percent of the world's population. China's birth rate has been low for many years, with no apparent prospect of rising. In India, however, the birth rate's decline has ended, at least for now, as higher fertility and slower decline in India's populous northern states have begun to have a noticeable effect on national trends. But population trends remain difficult to predict, so it is impossible to say exactly when the world's population will reach 7 billion.

Global HIV/AIDS

This year's wallchart contains a new series of estimates of HIV/AIDS prevalence in each country as of the end of 2001. Adult HIV/AIDS prevalence worldwide is now put at 1.2 percent of the population ages 15 to 49, with sub-Saharan Africa being the region most seriously affected, at 9.0 percent. The World Health Organization (WHO) estimates that 40 million adults and children worldwide are infected with HIV/AIDS, with the largest number in South Africa, at 5.0 million. India has the second-largest number, at just under 4.0 million. The highest prevalence is found in Botswana, where 38.8 percent of adults are thought to be infected. WHO points out, however, that the variations in data available from each country mean that the total number of adults and children living with HIV/AIDS may be between 30 million and 50 million.

Aging and Population Decline in Europe

Despite rising concern in the more developed countries over population decline and the consequent aging of the population, there is little sign of any recovery in historically low birth rates in Europe and Japan. The impact of low birth rates is most evident in the aging of the population. The UN projection for southern Europe, for example, shows that even if the total fertility rate were to rise from the present level of 1.3 children per woman to 1.7 children per woman by 2040, the region's population would still decline. At the same time, the percentage of the population above age 60 would rise from about 22 percent today to an unprecedented 40 percent in 2050.

World's Largest Countries in 2002

Rank	Country	Population (millions)
1	China	1,281
2	India	1,050
3	United States	287
4	Indonesia	217
5	Brazil	174
6	Russia	144
7	Pakistan	144
8	Bangladesh	134
9	Nigeria	130
10	Japan	127
11	Mexico	102
12	Germany	82
13	Philippines	80
14	Vietnam	80
15	Egypt	71

World's Largest Countries in 2050

Rank	Country	Population (millions)
1	India	1,628
2	China	1,394
3	United States	413
4	Pakistan	332
5	Indonesia	316
6	Nigeria	304
7	Brazil	247
8	Bangladesh	205
9	Congo, Dem. Rep. of	182
10	Ethiopia	173
11	Mexico	151
12	Philippines	146
13	Vietnam	117
14	Egypt	115
15	Russia	102

World Population Clock, 2002

Currently, world population grows by a little over 79 million per year, roughly comparable to the population of Germany, the Philippines, or Vietnam. Almost 99 percent of natural increase (births minus deaths, disregarding any effects of migration) occurs in the less developed countries. The more developed countries as a group account for a mere 1.4 percent of natural increase, although there is wide regional variation: Europe's population experiences a natural decrease of about 1.0 million per year, but the remaining countries and regions (Australia, Japan, New Zealand, and North America) have a natural increase of about 2.1 million.

Less developed countries, home to 81 percent of the world's population, have 90 percent of the world's births per year. But rates of infant mortality are significantly higher in those nations: Nearly 99 percent of infant deaths worldwide occur in less developed countries.

About 6.6 million people are added to the world's population each month, equivalent to the population of Israel or El Salvador. The increase each week, at 1.5 million, is roughly equivalent to the population of Botswana.

The number of people added annually to world population has been declining recently, reaching its most recent peak of about 87 million around 1990. The number added each year has peaked a number of times in the past, and has been strongly affected by changes in China's birth rate. China and India account for a total of about one-third of births worldwide. Global growth will continue to reflect changes in the birth rates in such large countries. Should birth rates in those countries rise, global growth could reach yet another peak.

Acknowledgments, Notes, Sources, and Definitions

Acknowledgments

Data prepared by demographer Carl Haub. The author gratefully acknowledges Zuali Malsawma, PRB librarian, and Haruna Kashiwase, PRB population information assistant, who provided valuable research assistance, and the assistance and cooperation of staff members of the International Programs Center of the U.S. Census Bureau; the Population Division and the Statistics Division of the United Nations (UN); the Population and Migration Division of the Council of Europe; the Institut national d'études démographiques (INED), Paris; the World Bank; and Ralf Ulrich, CEO, Eridion GmbH, Germany, in the preparation of this year's data sheet. Suzanne Baker, former PRB policy fellow, produced many of the population projections in this year's data sheet.

Notes

The data sheet lists all geopolitical entities with populations of 150,000 or more and all members of the UN. These include sovereign states, dependencies, overseas departments, and some territories whose status or boundaries may be undetermined or in dispute. **More developed regions**, following the UN classification, comprise all of Europe and North America, plus Australia, Japan, and New Zealand. All other regions and countries are classified as **less developed**.

World and Regional Totals: Regional population totals are independently rounded and include small countries or areas not shown. Regional and world rates and percentages are weighted averages of countries for which data are available; regional averages are shown when data or estimates are available for at least three-quarters of the region's population.

Sub-Saharan Africa: All countries of Africa except the northern African countries of

Algeria, Egypt, Libya, Morocco, Tunisia, and Western Sahara.

World Population Data Sheets from different years should **not be used as a time series**. Fluctuations in values from year to year often reflect revisions based on new data or estimates rather than actual changes in levels. Additional information on likely trends and consistent time series can be obtained from PRB, and are also available in UN and U.S. Census Bureau publications.

Sources

The rates and figures are primarily compiled from the following sources: official country statistical yearbooks and bulletins; United Nations *Demographic Yearbook, 2000* (forthcoming) and *Population and Vital Statistics Report* (data available April 1, 2002) of the UN Statistics Division; *World Population Prospects: The 2000 Revision* of the UN Population Division; the UN Statistical Library; *Recent Demographic Developments in Europe, 2001* of the Council of Europe; and the data files and library resources of the International Programs Center, U.S. Census Bureau. Other sources include recent demographic surveys such as the Demographic and Health Surveys, Reproductive Health Surveys, special studies, and direct communication with demographers and statistical bureaus in the United States and abroad. Specific data sources may be obtained by contacting Carl Haub at the Population Reference Bureau.

For countries with complete registration of births and deaths, rates are those most recently reported. For more developed countries, nearly all vital rates refer to 2000 or 2001, and for less developed countries, for some point in the late 1990s.

Definitions

Mid-2002 Population

Estimates are based on a recent census, official national data, or UN and U.S. Census Bureau projections. The effects of refugee movements, large numbers of foreign workers, and population shifts due to contemporary political events are taken into account to the extent possible.

Birth and Death Rate

The annual number of births and deaths per 1,000 total population. These rates are often referred to as "crude rates" since they do not take a population's age structure into account. Thus, crude death rates in more developed countries, with a relatively large proportion of high-mortality older population, are often higher than those in less developed countries with lower life expectancy.

Rate of Natural Increase (RNI)

The birth rate minus the death rate, implying the annual rate of population growth without regard for migration. Expressed as a percentage.

Projected Population 2025 and 2050

Projected populations based upon reasonable assumptions on the future course of fertility, mortality, and migration. Projections are based upon official country projections, series issued by the UN or the U.S. Census Bureau, or PRB projections.

Infant Mortality Rate

The annual number of deaths of infants under age 1 year per 1,000 live births. Rates shown with decimals indicate national statistics reported as completely registered, while those without are

estimates from the sources cited above. Rates shown in *italics* are based upon fewer than 50 annual infant deaths and, as a result, are subject to considerable yearly variability.

Total Fertility Rate (TFR)

The average number of children a woman would have assuming that current age-specific birth rates remain constant throughout her childbearing years (usually considered to be ages 15 to 49).

Population Under Age 15/Age 65+

The percentage of the total population in these ages, which are often considered the “dependent ages.”

Life Expectancy at Birth

The average number of years a newborn infant can expect to live under *current* mortality levels.

Data Availability Code

Provides a general indication of data availability. An “A” indicates a country with both complete vital statistics (birth and death data) and either a national-level census within 10 years or a continuous population register. If a country has complete vital statistics or a continuous population register and a national-level census within 15 years, it is rated “B.” Also rated “B” are countries that have one of the three sources necessary for an “A” plus either a usable national survey or a sample registration system within 10 years. “C” indicates that at least a census (within 15 years), a survey (within 10 years), or sample registration system is available. “D” indicates that little or no reliable demographic information is available and that estimates are based on fragmentary data or demographic models. Countries whose demographic situations have been seriously disrupted and for which there are few recent data are also coded “D.” There can be considerable variation in the quality of data within the same category.

Percent Urban

Percentage of the total population living in areas termed “urban” by that country. Typically, the population living in towns of 2,000 or more or in national and provincial capitals is classified “urban.”

Percent of Adult Population Ages 15 to 49 With HIV/AIDS

The estimated percentage of adults with HIV/AIDS at the end of 2001. These data are compiled by UNAIDS and the World Health Organization. Please note that successive estimates, such as the end-1999 estimates of HIV/AIDS prevalence used on the 2000 and 2001 editions of the data sheet, cannot be used as a time series, given the variation in data available for estimating levels from year to year. *Italics* indicate estimates for the end of 1999.

Contraceptive Use

The percentage of currently married or “in-union” women of reproductive age who are currently using any form of contraception.

“Modern” methods include clinic and supply methods such as the pill, IUD, condom, and sterilization. Data are from the most recent available national-level surveys, such as the Demographic and Health Survey, Reproductive Health Survey programs, and the UN Population Division *Levels and Trends of Contraceptive Use as Assessed in 2001*. Other sources include direct communication with national statistical organizations and the databases of the UN Population Division and the U.S. Census Bureau. Data refer to some point in the 1990s. Data prior to 1996 are shown in *italics*.

Government View of Current Birth Rate

This population policy indicator presents the officially stated position of country governments on the level of the national birth rate. Most indicators are from the UN Population Division, *Global Population Policy Database*, 1999.

Doubling Time

The doubling time of a population is simply the number of years it would take for a population to double in size if the present rate of growth remained unchanged. Used for many years, its primary purpose has been to emphasize just how quickly populations can grow, doubling their numbers geometrically.

GNI PPP per Capita, 2000 (US\$)

GNI PPP per capita is gross national income in purchasing power parity (PPP) divided by midyear population. GNI PPP refers to gross national income converted to “international” dollars using a purchasing power parity conversion factor. International dollars indicate the amount of goods and services one could buy in the United States with a given amount of money. Data are from the World Bank, *World Development Indicators*, 2002. *Italics* indicate data for 1998 or 1999.

Related PRB Publications

2002 Women of Our World

by Justine Sass and Lori Ashford

While the last half-century has seen major gains in women's health, education, and rights, progress has been slow or uneven in many areas. Gender inequality, or disparities between men and women, is still pronounced in the poorest regions and countries of the world. Being born female affects one's life chances in all societies, but the particular conditions facing women vary from one society to another. This data sheet catalogs the status of women in 168 countries, with a focus on demography, reproductive health, education, economic status, and political leadership. (IDS02WWENG; Feb. 2002) \$4.50

Government Spending in an Older America

by Ronald Lee and John Haaga

The population of the United States is getting older. Older people receive more in public benefits, notably Social Security and public spending on health care, than they pay each year in taxes. Public finances must be adapted to deal with a new demographic situation. This latest issue in the series *PRB Reports on America* is not intended to support specific reform proposals, but rather to present data and criteria for judging the alternatives. (ROA3.1; May 2002) \$5.00

Population Handbook, International Edition

by Arthur Haupt and Thomas Kane

The 4th edition of this handbook contains data from many countries that illustrate the rates, ratios, and concepts of demography. This edition also contains a new section of factors that affect fertility, a revised glossary, a trilingual thesaurus, and a list of sources for demographic information, including websites. (HBINT4; 1998) \$10.00

International Migration: Facing the Challenge

by Philip Martin and Jonas Widgren

At least 160 million people were living outside their country of birth or citizenship in 2000, up from an estimated 120 million in 1990. Their presence raises major socioeconomic issues in the countries of origin and countries of destination. This *Population Bulletin* explains why people cross national borders, why such migration is often controversial, and how migration can be managed more effectively in the 21st century. International migration is examined within the major world regions. (BUL57.1; March 2002) \$7.00

Women, Men, and Environmental Change

by Justine Sass

Women and men have different gender-based roles and responsibilities in their own lives, families, households, and communities. Understanding women's and men's relationships to the environment plays an important role in developing solutions for more sustainable use of natural resources. This policy brief, part of PRB's series "Emerging Policy Issues in Population, Health, and the Environment," examines how gender differences play a part in natural resource use, how resource depletion affects women and men differently, and what has been done worldwide to integrate gender concerns in environmental planning. (IENVGEN; Jan. 2002) \$3.00

The World HIV/AIDS Epidemic

by Peter Lamptey, Merywen Wigley, Dara Carr, and Yvette Collymore

The number of HIV/AIDS cases worldwide exceeds 40 million, with the vast majority in sub-Saharan Africa. As the numbers climb and infections spread into the general population,

governments and the international health community struggle to cope. This *Population Bulletin* traces the HIV/AIDS pandemic in major world regions, looking at the primary modes of transmission and issues in each region. The authors assess the current technology and methods to treat HIV/AIDS and successful strategies to stem its spread. They also discuss the factors that increase the vulnerability and risk of specific population groups including young women, injecting drug users, and children. (BUL57.3; Sept. 2002) \$7.00

Family Planning Worldwide

by Carl Haub and Britt Herstad

Family Planning Worldwide is a quick-reference data sheet with the most recent statistics on contraception for the countries and regions of the world. It presents survey data for women (either married or in informal unions) who are using traditional or modern methods of contraception; sources of supply of modern methods; and mothers' attitudes toward recent births. (IDSFP; July 2002) \$4.50

Making the Link: Population, Health, Environment

by Jonathan Nash and Roger-Mark DeSouza

This wallchart provides information and data on critical linkages between people and the environment. Thirteen demographic and health and environment indicators are given for 123 countries, six world regions, and the world as a whole. Accompanying text and graphics highlight trends in urbanization, population momentum, consumption levels, carbon dioxide emissions, changes in land use, and declining availability of fresh water. (IDS02ENV; June 2002) \$4.50

About PRB

Founded in 1929, the Population Reference Bureau is the leader in providing timely and objective information on U.S. and international population trends and their implications. PRB informs policymakers, educators, the media, and concerned citizens working in the public interest around the world. Our efforts are supported by government contracts, foundation grants, individual and corporate contributions, and the sale of publications. PRB is governed by a Board of Trustees representing diverse community and professional interests.

PRB gathers, interprets, and disseminates population information through a broad range of activities:

Research and Policy Analysis

PRB's staff monitors population trends and investigates the demographic dimensions of a variety of social and economic issues such as reproductive health, family planning, aging, crime, immigration, changing family structure, minorities' status, and the environment.

Publications

We produce a large number of publications for policymakers, educators, journalists, and many other non-technical audiences. PRB publications include the *Population Today* newsletter, the quarterly *Population Bulletin*, the annual *World Population Data Sheet*, and *PRB Reports on America*. PRB also produces specialized publications covering population and public policy issues in the United States and in other countries.

Media Outreach Programs

PRB helps make technical research accessible to print and broadcast journalists around the world. We do this through collaborative media networks, background publications, seminars, press conferences, and briefings. We also generate articles for many newspapers, magazines, and wire services.

Technical Services

PRB provides technical support to government institutions and private organizations. We help countries increase awareness and understanding of population issues.

Information Services

We offer information on a wide range of topics, through a variety of channels including seminars and internships. PRB maintains one of the largest specialized population libraries in the United States. PRB's website (www.prb.org) has full text or excerpts of many PRB publications, as well as links to many other websites on population.

Education

Our education program provides middle and secondary school teachers with everything from curriculum materials and teaching kits to seminars and teacher training workshops. In this way, we help educators to better cover topics like population and the environment, ethnic diversity, and world population growth.

Websites

- **www.prb.org**. Your first stop for information on population trends and their implications.
- **www.measurecommunication.org**. The MEASURE Communication project promotes wider dissemination and use of information on population, health, and nutrition for decisionmakers in less developed countries.
- **www.popnet.org**. A comprehensive directory of population-related websites, arranged by world region and organization type.
- **www.ameristat.org**. Data and analysis on 14 U.S. population topics, including income and poverty, education, marriage, and fertility.

How to Become a PRB Member

PRB is a membership organization. As a PRB member, you can help increase public awareness of the role that population plays in shaping our world. Membership in PRB will provide you with unbiased information, accurate reporting, and timely publications.

Here are a few of the many PRB membership benefits:

- The annual *World Population Data Sheet* summarizes and compares the latest population estimates, projections, and other key indicators for 200 countries.
- The quarterly *Population Bulletin* gives you in-depth coverage of important domestic and international population issues.
- The newsletter *Population Today* brings you news and trends in the world of demography.
- *PRB Reports on America* address significant national demographic issues and their effects on American society.
- PRB's library of more than 13,000 volumes and 350 periodical titles is available for your research needs. You may visit the library or enlist the research help of the library's staff.

To join PRB, call our toll-free number, **800-877-9881** (Monday through Friday between 9 a.m. and 5 p.m. EST); e-mail PRB at **popref@prb.org**; visit our website at **www.prb.org**; or write to Population Reference Bureau, 1875 Connecticut Ave., NW, Suite 520, Washington, DC 20009-5728, USA.

Membership categories: Individual, \$49; Educator, \$39; Student/People over 65, \$34; Library/Non-profit, \$64; Other organizations, \$225 (members outside the United States, please add \$15; educators, people over 65, and students should provide supporting documentation).
